OBJECTIVES

I believe that this website will serve its main purpose of providing accurate information and necessary services to interested persons in the areas of travels and logistics.

JeansTravel & Logistics website will provide vital information and the necessary travel services to people who travel for different purposes (business, tour, vacation and so on.)

My intent for the design of this website is to use the website to connect with travelers as well as give them access to a travel ticket online booking that is secure and faster than the ones they are used to.

When I started to design the JeansTravel & Logistics websites my fear was on how to create an exact website that resembled the wireframe I sketched so I made many mistakes on CSS especially concerning the arrangement of each page. I also had a problem on how to link my CSS to my HTML pages. I did not know how to create a button, how to arrange my images in grid or column form. I always scoured online for ideas and simplified explanations especially on W3Schools, Youtube and Google. I also met a friend in my area who assisted me by showing me how to resolve issues in CSS when coding. It was really tasking and frustrating at times. However, As I practiced and worked on my mistakes, I mastered all my mistakes and concerns until my webpages began to take shape and became like the wireframes I designed initially.

At the beginning of this course, I did not imagine myself designing a website of this nature since I did not follow everything I that was being taught because I had issues with setting up my gitbub repository to enable me host my website online.

I felt so frustrated that I thought that my instructor wanted me to fail the course since I couldn't meet deadlines due to delays with github settings. However, my instructor patiently listened to my plights and encouraged me accordingly and that boosted my interest. Online study has been a challenge especially because some students are too reluctant to contribute and that made me uninterested and apathetical about online meetings since there was no productive effort made by students to help one another.

One important aspect of doing something you have never done before is that you get frustrated, just as I was as I designed this website but I have learned that coding a website is as interesting and rewarding as doing any other productive task and as one makes mistakes and watches out for feedbacks and make corrections accordingly, they will improve and their mistakes when mastered, develop into useful skills. In fact, the skills I have learned has given me the privilege of designing a website for a company recently. Hence, I am already reaping from the new skills I have acquired in this course.
